Introduction

Scope and purpose of document (Gio P)

In one paragraph, describe what is contained in this document and the general purpose of a Project Plan. In a separate paragraph, provide an overview of your application.

In this document is a fully outlined plan on to create and manage the SkillSync application

The purpose of a Project Plan is to provide a System Scope, Capabilities, a basic rundown of the people involved, and financial opportunities and risks.

System Scope

Problem/Opportunity Description (Gio P)

In 1-2 paragraphs, describe what the goal is of your project. What problem are you trying to solve or what opportunity are you trying to take advantage of?

The goal of this project is to streamline the process of developing projects online. Users communicate with each other via the app. We are looking to take advantage of situations in which people can't leave their homes so they can access their projects and business ventures online.

Anticipated Business/Personal Benefits (Aidan L)

In one paragraph, describe what your company will hope to achieve by creating this application. In another paragraph, describe the benefits to the users.

In creating this application, we want to provide businesses with the ability to quickly and easily perform the tasks they need without the need to physically meet. We as the creators of the app would receive a paid subscription from the users in order for us to make a profit. The price would be affordable enough for the businesses to consider using us over competitors. In releasing this app, we would hope to let employees working from home communicate more easily with the rest of their team. This would help teams finish their projects more easily.

Users would benefit from using our app in many ways. One such way is the progress checks system. This would allow users to communicate with each other about what parts of a project are complete and what still needs to be done. Another benefit for the users would be the group discussion boards.

These boards would allow team members to communicate with each other without having to meet physically or online at the same time. Users would be able to leave messages for their teams to read at any time in the future.

System Capabilities (LEE O)

List of major functions of the system. These are taken from the Project Proposal and expanded upon.

Group Discussion boards:

- *Discuss and collaborate on different aspects of the project*
- *Offer ideas for team to see.*

Internal IM message system:

- *Message individuals or in groups for simple and effective communication*
- *Host/Schedule meetings via calls*

Checklist Creation System:

- *Keep track of important list items*
- *Setting timeline, deadlines, and checkpoints to reach project deliverables*

Progress checks on projects due soon:

- *Check on overall project progress*
- *Notifies users when projects are due (weekly, daily, or hourly)*

Team management capabilities:

- *Manage departments and their respective projects.*
- *Task assignments to group members*

System Context (Aidan L)

Using Visio or draw.io, create a System Context Diagram which depicts the primary users of the system and the information that is exchanged between them and the system.

Submit the System Context file as a separate file from your plan document

Schedule (Leo H)

Staff Organization (LEE O)

How is your team organized; who is the team leader and how are you organized?

I think we would all agree that Leo is our group leader. He is the one that came up with the idea for SkillSync. Our team is organized when it comes to sticking to deadlines and meeting up to discuss our ideas. We try to meet up twice a week (Mondays and Thursdays) to plan ahead for our next objective. It's in the team's best interest that we stick to this schedule because it gives us a plan ahead if something changes.

Tracking and control mechanisms (Leo H)

We will document any and all changes made to any software, code, or documents to ensure everyone is on the same page at all times. Its easy for most of the planning and initial layouts as we can just share a google document so we can all edit and see the revision history. What we can do is put bits of the code into documents as well to document the changes and then just paste it into an IDE for testing. I plan to check in around the midpoint in each week to see where everyone is with their given activities.
